

A DEFENSIBLE WORKFLOW MODEL

BUILDING PROCESS INTEGRITY INTO THE DIGITAL FABRIC OF THE DOC

A defensible workflow is one where every action follows a defined path, is performed by an authorized role, and is automatically recorded. This model illustrates how structured digital workflows move beyond simple task management to support accountability, transparency, and regulatory compliance within correctional facilities. By shifting from ad hoc processes to a structured model, Departments of Corrections ensure that their operations are not just fast, but legally sound.

WHY IT MATTERS FOR THE DOC

When processes rely on fragmented emails, unmanaged spreadsheets, or informal handoffs, agencies struggle to prove compliance during audits, investigations, or legal challenges.

A defensible workflow eliminates "he-said-she-said" scenarios by:

- Reducing Ambiguity: Providing a single, immutable version of the truth.
- Strengthening Oversight: Ensuring no step is bypassed or altered without authorization.
- Providing Confidence: Guaranteeing that internal policies and external regulations are followed consistently, every time.

HOW 3SG PLUS HELPS

We help Departments of Corrections design and implement digital workflows that align operational reality with strict regulatory expectations. We don't just speed up your work—we protect your agency by ensuring every step can be reconstructed after the fact.
